

PROFILE

The Organization

Fiven is the worldwide leader in the business of silicon carbide grains and powders. The Fiven Company is the result of a recent corporate carve-out of Saint-Gobain's Silicon Carbide business by OpenGate Capital. The experience and history of our business reach back over 100 years. The company prides itself in serving many customers, leaders in their own segment worldwide, through long-term, trust-based relationships.

Fiven is a global leader in silicon carbide ("SiC"), a material used in a variety of industrial applications. SiC is recognized for superior hardness, high thermal conductivity and chemical inertness, making it the preferred material for demanding applications: abrasive, metallurgy, filtration, technical ceramics, semiconductor, armor and other uses.

The Fiven Group is headquartered in Oslo, Norway, with manufacturing entities in Arendal and Lillesand (Norway), Hody (Belgium), Barbacena (Brazil) and Puerto Ordaz (Venezuela).

Being a worldwide leader within our industry, we aim to utilize our global reach and unparalleled manufacturing experience to continue to serve the industry giants of today and tomorrow and to drive change across our whole value chain. Since the carve-out and the formal, stand-alone foundation of Fiven in 2019, we have committed significant resources towards sustainable initiatives within our organization with the ambition of positively contributing to our employees, counterparties, the societies we operate in, as well as the environment
